DETAILED ACTION

Preliminary Amendment

The preliminary amendment filed 27 December 2001 has been entered.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over *Lukosz* (5,120,131).

As to **claims 1 and 5**, Lukosz discloses a system for selecting detection of changes in samples, comprising:

a light source (6), a photodetector (10), gas cell (col. 5, lines 15-20 and col. 8, lines 27-30) containing a gas through which gas passes and through which light from the light source passes and is reflected back to the photodetector (see fig. 6, col. 9, lines 42-60). Lukosz even provides an embodiment that uses a single polarization preserving monomode fiber (col. 9, lines 62-68). It would have been obvious to one having ordinary skill in the art at the time of invention to include a polarization preserving monomode fiber to minimize light loss and to maintain the polarization of the return light.

As to **claims 2 and 6**, Lukosz it would have been obvious to one having ordinary skill in the art at the time of invention the return light is polarized orthogonal to the transmitted light (col. 12, lines 35-40).

Art Unit: 2877

As to **claims 3 and 7**, Lukosz it would have been obvious to one having ordinary skill in the art at the time of invention a beam splitter is provided to split the return light (fig. 6, item 9).

As to **claims 4 and 8**, Lukosz it would have been obvious to one having ordinary skill in the art at the time of invention the light source and photodetector are positioned remotely to the gas cell (see fig. 6).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
